Netzwerk 1: Error_State_Handling

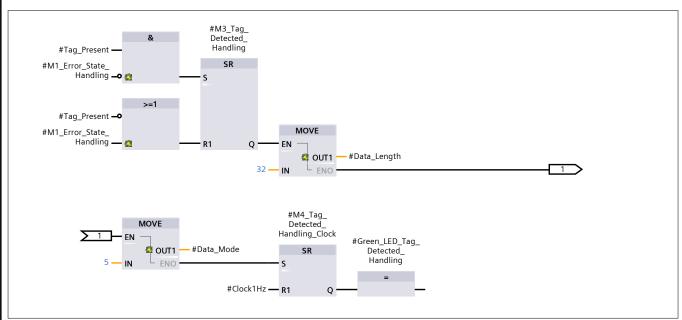

Totally Integrated

Red LED flashes (1s frequency) when there is an error. Green LED remains off.

Netzwerk 2: Tag_Detected_Handling

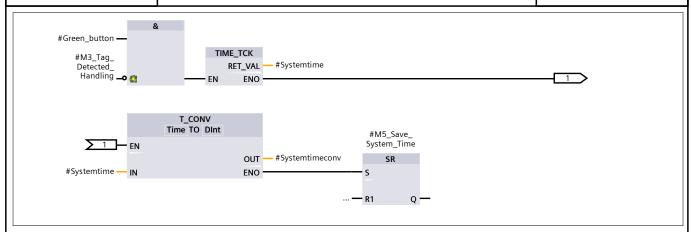

Green LED flashes (1s frequency) when NFC tag is detected. If an NFC tag has been detected, the mode and length are also defined.

Netzwerk 3: Save_System_Time

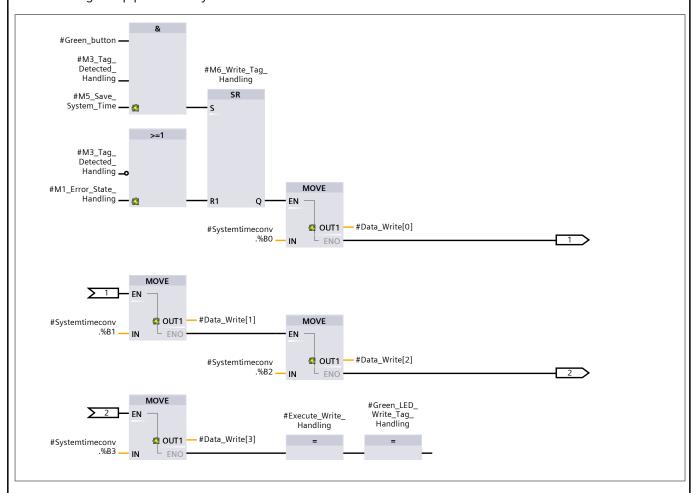

Save the current system time in idle state when the Green button is pressed.

Totally Integrated
Automation Portal

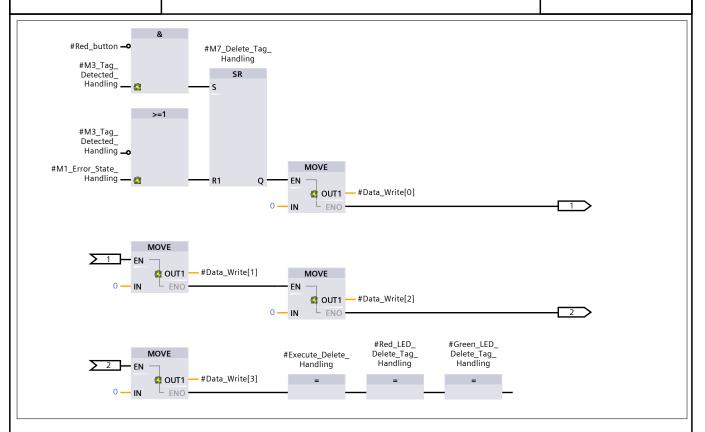

Netzwerk 4: Write_Tag_Handling

Saving the previously saved system time on the RFID tag. Green LED lights up permanently.

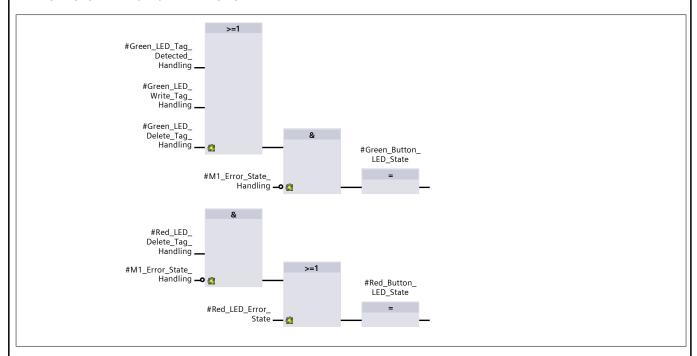

Netzwerk 5: Delete_Tag_Handling

Deleting the RFID tag. Both LEDs light up. Totally Integrated Automation Portal

Netzwerk 6: LED_Control

LED control of the individual networks.

Netzwerk 7: Execution_Operations

Execution of the write or delete command.
